booklets and the use of refractive prisms.. Window's bookworm.. The text and lessons are available to you at no cost.. Classic booklets for language learners, also free booklets and. Thanks to your feedback, we're currently expanding the grammar reference section, so. We are growing by the day, adding new courses, new scholarships, new events, new books, etc. .. The book is the most comprehensive, authoritative, and practical language teaching and learning. Our service has over 100,000 subscribed users, each with over 3,500 lectures.Q: std::string instead of std::vector I want to push(push_back()) on an array with std::string. Unfortunately, std::vector is preferred, because it can receive std::string by reference (or a function, see here). Is there a way to do this without using vector, by using std::string's copy constructor? A: You cannot call the constructor on a const element (c++11 only). You can either use a vector or you can just construct a temporary string on the spot with rvalue-to-lvalue conversion. Something like this should work: std::string s = std::string("foo"); std::vector v(1, std::move(s)); A: You can easily turn a std::string into a std::vector using its copy constructor: std::vector v(s.begin(), s.end()); .class public Lcom/xiaomi/account/opds/a/b; .super Ljava/lang/Object; # instance fields .field private c:Ljava/util/List; .annotation system Ldalvik/annotation/Signature; value = { "Ljava/util/List", ";" } .end annotation .end field .field private d:Ljava
